PILOT COLLEGE-TO-SCHOOL REPORT

Introduction

This pilot College-to-School Report is the first systemwide initiative to provide high schools with information on the performance of their graduates enrolled in Massachusetts public postsecondary institutions. The Report is designed to help improve communication between public postsecondary institutions and high schools in Massachusetts by providing high schools with indicators of how their students perform and persist in college.

High school administrators now have information on the performance of their high school graduates after their first year of enrollment at a public higher education institution. This pilot provides useful information on the number of recent high school graduates who required remedial course work in English (writing and/or reading) or Math, the percentage of students enrolled in remedial courses, the percentage of students enrolled in remedial courses who returned in Fall 1995, the overall return rate of students, and the average number of credits earned by returning students in the first year.

We recommend that the information in this report not be used to compare high schools with each other due to the small number of graduates enrolled from some schools and the fact that the sample does not include those students who attended out-of-state institutions and private institutions. In addition, the database does not contain students' high school grade point averages (GPA). Without this information, we cannot determine whether weaker performing students from some high schools are being compared with stronger performing students from another. Future reports will contain the high school GPA and will be able to link this with the college GPA.

The pilot is based on data submitted by 14 institutions: one university campus, six state colleges, and seven community colleges. These institutions had a total enrollment of 15,163 freshmen, representing half of the 30,081 freshmen enrolled systemwide in Fall 1994. At the 14 institutions, approximately 6,273 (or 41%) of the freshmen graduated from a Massachusetts high school in June, 1994. This report is based on the performance of these students.

PILOT COLLEGE-TO-SCHOOL REPORT

Report Overview

This initial two-part report includes the following data, compiled by institution and aggregated by segment, for those students who graduated from selected Massachusetts high schools in June, 1994 and enrolled as freshmen in 14 Massachusetts community colleges, state colleges and UMASS in Fall 1994:

- number of students enrolled as freshmen in Fall 1994
- number and percent of students enrolled in remedial English and Math courses
- number and percent of students who returned in Fall 1995
- number and percent of remedial students who returned in Fall 1995
- average number and ranges of credits earned by returning students
- average and range of first year grade point average (GPA)

Part I is a system-wide summary that provides an aggregate number and percentage of students enrolled in remedial English and Math courses. It also provides the average and range of student GPAs and credits earned by returning students in each higher education segment (university, state colleges and community colleges) and institution.

Part II, "*Summary of 1994 High School Graduates Performance in Massachusetts Public Higher Education*," shows how 1994 high school graduates performed in their first year of enrollment at selected public higher education institutions. Data are reported only for high schools that had five or more students who returned in Fall 1995 to a university, state college or community college campus.

PILOT COLLEGE-TO-SCHOOL REPORT

Future Plans

Next year's report will provide information on June 1995 graduates at all twenty-eight public higher education institutions. The 1995 and 1996 reports will track students as they transfer to other institutions within public higher education. This tracking feature will improve the accuracy of transfer and persistence data and provide a greater understanding of how students progress through the public higher education system. Beginning with students entering public higher education in Fall 1997, when the Board of Higher Education's new admission standards are in place, the report will be able to compare a student's high school and college GPA.

College-to-School reporting is designed to promote discussion about the academic performance and persistence of Massachusetts high school graduates in public higher education. Future reports will be further refined over the course of the next year as reactions from high schools and campuses are received. Ultimately, increased direct communication between college and high school faculty should clarify the relationship between courses taken in high school and success in college, and lead to improved student academic preparation and performance.

NOTE: Caution should be used with regard to interpretation, since these are only partial data. Refrain from drawing conclusions about the entire population because the data are not random. Results may be different when the data for all students at all public colleges and university campuses are reported.

PILOT COLLEGE-TO-SCHOOL REPORT

Highlights Regarding Student Performance at the University

- At the university level, data from one campus, the University of Massachusetts Boston (UMB) are reported. This institution serves a largely non-traditional population of students, many of whom graduated from high school more than three years prior to their enrollment at the university. In fact, just 45% of UMB's total incoming freshmen in Fall 1994 graduated from a Massachusetts high school in June, 1994.
- University students in the report earned an average 2.7 grade point average (GPA).
- University students in the report earned an average 22 accumulated credits.
- Nine percent of the university students in the report were enrolled in a remedial English course and eighteen percent were enrolled in a remedial Math course in Fall 1994.
- The university students in the report had a 68% return rate in the Fall of 1995.

PILOT COLLEGE-TO-SCHOOL REPORT

Highlights Regarding Student Performance at the State Colleges

- Of the nine public state colleges, the six included in this pilot were Bridgewater State College, Fitchburg State College, North Adams State College, Salem State College, Westfield State College and Worcester State College.
- Returning state college students in the report earned an average 2.4 GPA.
- State college students in the report earned an average of 26 accumulated credits.
- Fourteen percent of the state college students in the report were enrolled in a remedial English course and twelve percent were enrolled in a remedial Math course in Fall 1994.
- Students in the state college cohort had a 67% return rate in the Fall of 1995.

PILOT COLLEGE-TO-SCHOOL REPORT

Highlights Regarding Student Performance at the Community Colleges

- Of the fifteen public community colleges, seven provided data for this pilot College to School Report. They include Bristol, Cape Cod, Greenfield, Holyoke, North Shore, Northern Essex, and Springfield Technical Community College.
- Only 24% of the freshmen at these seven community colleges graduated from high school in June 1994. This proportion is typical of community college experience nationally. Community colleges serve a large number of older and non-traditional students. Many community college students enroll with the intention of taking a few courses to enhance their skills prior to transferring to four year institutions or entering the workforce.
- Community college students in the report earned an average 2.4 GPA.
- Community college students in the report earned an average of 21 credits.
- Thirty-seven percent of the incoming freshmen at community colleges in this report were enrolled in a remedial English course and thirty-six percent were enrolled in a remedial Math course in Fall 1994.
- Fifty-three percent of the community college students in the report returned in the Fall of 1995.

PILOT COLLEGE-TO-SCHOOL REPORT

Community College		31	18	58%	14	45%	12
Fitchburg High School	Fitchburg						
State College		28	10	36%	21	75%	25
Framingham North High School	Framingham						
State College		20	4	20%	12	60%	25

NOTE: To protect student confidentiality, information is only reported for a high school when five (5) or more students at the university, state college or community college level returned in Fall 1995. Each high school listed on this summary will receive an individual high school performance report containing more detailed information.

Students are placed in remedial courses based upon the results of a placement test; these tests are not uniform across the system. A task force is currently reviewing developmental assessment and placement issues.

CAUTION REGARDING INTERPRETATION: These are only partial data. Refrain from drawing conclusions about the entire population because the data are not random. Results may differ when data for students at all public colleges and university campuses are reported.

Each high school listed on this summary will receive an individual high school performance report containing more detailed information.

Students are placed in remedial courses based upon the results of a placement test; these tests are not uniform across the system. A task force is currently reviewing developmental assessment and placement issues.

CAUTION REGARDING INTERPRETATION: These are only partial data, refrain from drawing conclusions about the entire population because the data are not random. Results may differ when data for students at all public colleges and university campuses are reported.

PART II

Summary of 1994 Public High School Graduates' Performance in Massachusetts Public Higher Education

Massachusetts High School	Town	Number of Students Enrolled Fall '94	Number of Students Enrolled in a Remedial Course Fall '94	Percentage of Students Enrolled in Remedial Courses Fall '94	Total Number Returned Fall '95	Percent- age Returned Fall '95	Average Number of Earned Credits by Returning Students
